

## **IMPORTANT NEWS UPDATE OCTOBER 2017**

### **ELECTRICAL CAPACITANCE TOMOGRAPHY (ECT) MEASUREMENT SYSTEMS**

Because of component obsolescence problems, we can no longer supply any new ECT measurement systems. We can still supply passive multi-electrode ECT sensors and may also be able to supply refurbished measurement systems in the future (see below).

As we are still receiving enquiries for this high-quality equipment from potential new customers, we have decided to start a buyback scheme for former customers who have purchased our equipment in the past and who now have no further use for it.

If you have either a **PTL300E** or **TFLR5000 ECT** measurement system which is no longer in use (and is in good working order), please contact us\* to register it with our second user scheme. We will then acknowledge your interest and contact you again with an offer to purchase it for refurbishment and resale when we receive new enquiries for this equipment.

We are leaving all of our existing sales and technical information on this website as a service to new and existing users.
